

CONTRIBUTING

Contributing to Challenges

Prerequisites

- Go 1.24 or later
- Git with SSH access configured
- Docker/Podman (for integration tests)

Getting Started

1. Clone: `git clone <ssh-url> && cd Challenges`
2. Build: `go build ./...`
3. Test: `go test ./... -count=1 -race`

Commit Conventions

`<type>(<scope>): <description>`

`feat(assertion): add regex evaluator`
`fix(runner): prevent timeout race`
`test(registry): add cycle detection tests`

Scopes: challenge, registry, runner, assertion, report, plugin, monitor

Adding New Assertion Evaluator

1. Add to `pkg/assertion/evaluators.go`:

```
func RegexMatchEvaluator(value, expected interface{}) (bool,  
    error) {  
    pattern := expected.(string)  
    text := value.(string)  
    matched, err := regexp.MatchString(pattern, text)
```

```
    return matched, err
}
```

1. Register in NewEngine():

```
engine.RegisterEvaluator("regex_match", RegexMatchEvaluator)
```

1. Test in pkg/assertion/evaluators_test.go

Testing

```
go test ./... -count=1 -race      # All tests
go test ./... -short              # Unit tests only
go test -tags=integration ./...  # Integration tests
go test -bench=. ./tests/benchmark/
```

Pull Request Process

1. Branch: feat/your-feature
2. Commit with conventional commits
3. Pass all tests: `go test ./... -count=1 -race`
4. Format: `gofmt -w .`
5. Create PR against main
