

QWEN.md “ Qwen Code context for this module

INHERITED FROM the Helix Constitution

This module is governed by the Helix Constitution. All rules in the constitution’s QWEN . md and the C o n s t i t u t i o n . md it references apply unconditionally. Locate the constitution from any nested depth via its `find_constitution.sh` helper “ do NOT hardcode a path (this module stays fully decoupled and project-agnostic per §11.4.28).

Canonical reference: <https://github.com/HelixDevelopment/HelixConstitution>

Read CLAUDE.md “ it is mandatory

This module’s canonical agent-instruction file is CLAUDE.md in this directory. Before doing any work in this module, open and read CLAUDE.md and this module’s CONSTITUTION.md in full. Every rule there binds Qwen Code exactly as it binds Claude Code.

This file is a plain-text pointer and deliberately uses no auto-import directive. Qwen Code’s memory-import processor resolves import-prefixed tokens recursively, and the instruction files reference tokens that are not files. To stay compatible with Qwen Code this file contains no such tokens “ read CLAUDE.md directly.
